

“Skin is a barrier
between the outer
and inner world.”

Nina Ummel,
Revenir Flagship Spa
Seattle, Washington

Now you can own the
same systems that day
spas and medical spas use
in their skincare services!

REVENIR®

We want to introduce a new spa technology to you that is the latest innovation in anti-aging skincare. Electrolyzation uses an ionization process of separating molecules into fine particles capable of penetrating the waterproof barrier of the skin to the deepest layers, where healing begins. The electrolysis takes place in portable hand-held units and the gentle shower is delivered through a fine spray mist. The systems are both high-tech and holistic, providing natural water and vitamin C to the skin through the advanced science of ionization.

For a limited time only, we are now offering **\$100 off the consumer price** of our Revenir Skincare Systems with purchase of C-Solution and any Sundurance Sunscreen product! These are the most advanced scientifically proven skincare systems on the market today. Please see the back for full details, as well as for information on the latest sunscreen technology available today.

For a Limited Time Only,
\$100 off the Revenir
Skincare System*

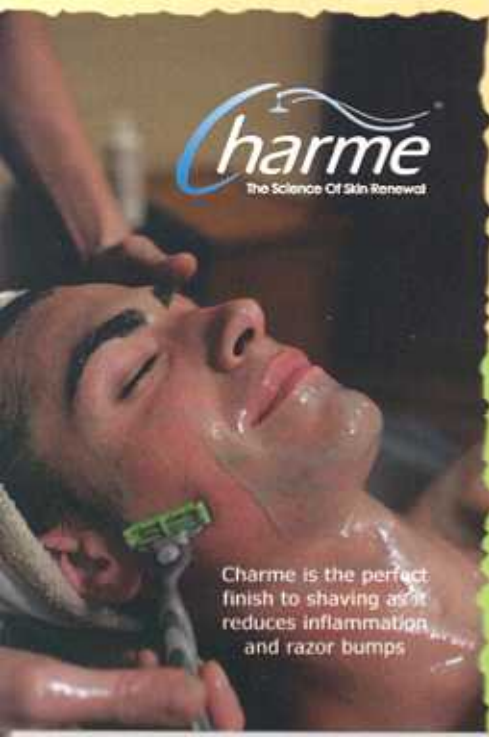

* with purchase of any Sundurance
sunscreen and case of C-Solution

The Revenir Skincare System electrolyzes a Vitamin C solution and delivers it to the deepest layers of the skin for superior antioxidant benefits. Clinically proven to reduce wrinkles and lighten hyperpigmentation; this system effectively treats tough facial wrinkles, age spots and dark patches on the skin due to sun damage. Electrolyzation strengthens the antioxidant potential of Vitamin C up to eight times that of topical applications and using Vitamin C within 15 to 20 minutes after sun exposure can help to reverse sun cell damage.

Sundurance has teamed with Revenir Skincare to create a completely new and unique sunscreen technology. Traditionally, sunscreens have used the common UV-blocking chemical OMC, octyl methoxycinnamate, which is unfortunately absorbed through the skin into the body's systems. This new sunscreen technology uses microscopic silicate molecules to encapsulate the chemical in micro-pearls that lay

on the surface of the skin, never breaking open to expose the chemical into the body, or irritating the skin. The molecules are so small that they are invisible to the naked eye and cannot be felt on the skin. They stay on the surface of the skin for 24 hours unless they are washed off, far surpassing the efficacy of virtually all sunscreens, which need to be reapplied after a few hours. The sunscreen lasts in its tube for a full-two years, a much longer shelf-life than most topical products.

Charme
The Science Of Skin Renewal

Charme is the perfect finish to shaving as it reduces inflammation and razor bumps

The Charme System produces low pH acidic water for superior hydration and cleansing. Low pH acidic water soothes many skin conditions including psoriasis, eczema, rosacea, sunburn and dry skin and has been clinically proven to reduce acne. This system effectively kills bacteria while hydrating the skin at the deepest layers and strengthens the barrier function of the skin to accelerate the natural healing process. Charme naturally reduces inflammation and redness, as well as provides an astringent effect. It is excellent for calming the skin after waxing or shaving, which helps reduce redness immediately.
